

LIGHT

Michelle Serrano - mserran2

Description:

The game is a platform based game in which there are three levels you can freely access. On the bottom, there will be an underwater cave system, in the middle just caves, and on top, trees. The player will have to attempt to traverse the map while finding fireflies. Every once in a while, the screen will flash and then an event occurs, and the player must seek shelter in the light spot once the flashing occurs. Once the player finds all the fireflies, or dies to the spiders when an event occurs, the game ends.

A main goal of this project is to be visually appealing, with a large emphasis on the aesthetics of the game, with it generally looking like the picture below.

Forest Scene (Source: LIMBO)

Similar Projects:

Gris - (Downloadable on Steam)

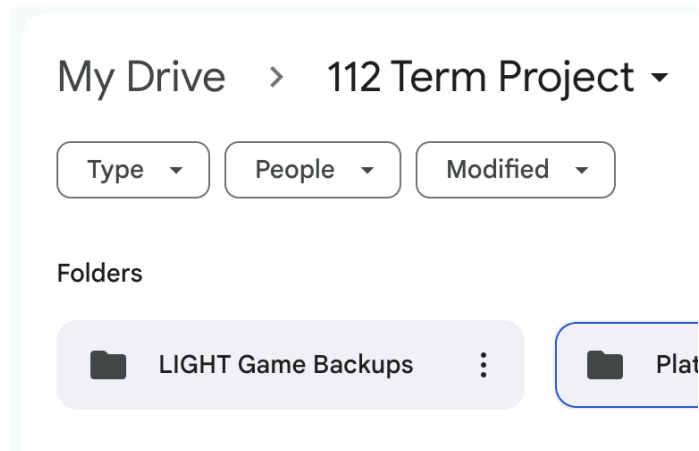

- Visually appealing game with simple gameplay
- Objective is to collect stars around map
- Underwater level & related swimming mechanics
- Switching forms

LIMBO - (Downloadable on Steam)

- 2D platformer with simple yet visually appealing scenery
- Spider animations
- Continuous level (still checkpoints but no obvious levels)

Version Control / Backup Plan:

I will have a folder in my google drive that I'll upload the file with the format (LIGHT.V{Version Number}_{DATE}.{TIME})

Tech List:

I am currently not planning on using any external hardwares, and am planning on making this entirely in cmu_graphics.
